The "**PORTRAITS - Breath Recoding**" CME conference will draw attention to a novel approach in the management of lung disease, focusing on the physiopathology of "**treatable traits**". The thinking behind this approach is to use strategic tools to explore the **future of chronic lung disease management by looking ahead towards new perspectives, data and evidence** from recent studies and real-life experiences. The central themes here are **PRE-COPD, COPD, ILD and Bronchiectasis**.

In the spirit of a conference the meeting will encourage audience input on specific Clinical Cases via a web app during the "**Audience on Call**" sessions.

The closing interactive **Expert Panel** will give faculty - including a General Practice speaker - and audience a chance to challenge specific statements and proposals.

THE "**PORTRAITS - BREATH RECODING**" INTERNATIONAL CONFERENCE IS A 2-DAY MEETING BRINGING TOGETHER EXPERTS IN RESPIRATORY DISEASES FROM ACROSS THE WORLD TO THE CITY OF NAPLES, ITALY. THIS IS A **UNIQUE OCCASION TO DISCUSS CURRENT OUTCOMES AND EMERGING CHALLENGES** OF A "**TREATABLE TRAITS**" APPROACH WHILE FACING THE **MOST IMPORTANT ISSUES AND ASPECTS OF DAILY CLINICAL LIFE**.
